

DEFI MATHS CM2 – LVE – ANGLAIS

Witches...

It's Halloween...

You are not alone: there are 400 people around the witch.

Everyone has got a non burning candle.

The witch is going to light her candle first. Then she'll use her candle to light someone else's candle.

It takes 30 seconds to do that.

Then the witch and the other person are going to light two other candles; and then the witch and the three other persons are going to light four other candles and so on until all the candles are lit.

How long will it take to light the 400 candles?
